

Special Issue on Business Process Management

RITA - Revista de Informática Teórica e Aplicada

We are pleased to announce the special issue, to be published in 2021, on Business Process Management (BPM) in the Revista de Informática Teórica e Aplicada (RITA). BPM is a discipline that covers the phases of process identification, process discovery, process analysis, process redesign, process implementation and process monitoring and control. Related to these phases many approaches and technologies have been proposed aiming advances in process documentation, automation and improvement. Therefore, we propose a special issue of RITA, focusing on trends and research related to these advances.

Papers must be written in English, according to the RITA formatting guidelines. Only full papers are accepted for submission. Papers will be refereed through a blind process for technical merit and content.

Topics of Interest (not limited to):

- Business Process Management and Natural Language Processing
- Research on BPM-related standards and technologies, e.g. BPMN, DMN, CMMN
- Blockchain in Business Process Management
- Process Mining approaches, tools and techniques
- Digital Innovation and Transformation with BPM
- Dynamic Adaptation in Process-aware Information Systems
- Artificial intelligence in Business Process Management
- Business Process Visualization
- Case studies, literature reviews and empirical studies on BPM research topics
- Other BPM related topics (IoT, Smart Cities, Social-human aspects, Healthcare processes, Educational processes, Security issues)

Papers will be submitted to the journal in the normal way but authors should select the Special Issue - "Business Process Management".
